

BOWEN SCHOLARSHIP OPPORTUNITY WITHIN THE COLLEGE OF ARCHITECTURE

THE GARY AND ELIZABETH BOWEN SCHOLARSHIP

A \$2,000 annual scholarship is available to Native American or African American students with a grade point average of 3.0 or higher desiring to study architecture or associated arts at the University of Nebraska College of Architecture.

To apply for the Gary and Elizabeth Bowen Scholarship, or for more information on this or other available scholarships, contact the College of Architecture office at 402-472-9233 or at <http://architecture.unl.edu/scholarships.shtml>.

Architecture is a diverse and rewarding profession, combining creative and technical skills to design buildings of all types—from houses to skyscrapers, schools, churches, public spaces, and even furniture.

At the University of Nebraska–Lincoln College of Architecture, students learn how to design and construct buildings, how to use the computer for design, build scale models, and learn about the business side of the profession. The college offers many degree options including landscape architecture; interior architecture; construction management; architectural photography; and computer technology.

Architecture students study a broad range of subjects, including writing, design, graphics, computer applications, art history, mathematics, physics, structural systems, and building and materials construction.

ABOUT THE COLLEGE OF ARCHITECTURE

Headquartered in Architecture Hall—the visible manifestation of an architectural tradition that has served Nebraska for over a hundred years—the University of Nebraska–Lincoln’s College of Architecture’s programs in architecture, interior design, landscape architecture, and community and regional planning have a proud tradition of excellence in education, research, and service to the state of Nebraska and the nation.

Some 650 students are currently enrolled in classes offered through the college, learning from a faculty of 38 how to explore the past, present, and future of our communities. All of the professional programs within the College of Architecture are designed to provide each graduate with the critical research, analytical, conceptual, design, and technical knowledge they need to meet the challenges of stewardship of the natural environment and the innovative and sustainable design of the built environment.

From gallery displays and provocative seminars to the quiet of the library and the bustle of the design studio, the College of Architecture is hard at work serving both its students and the community.
